ABDULLAH AL MAHMOOD

has successfully completed the online, non-credit Specialization

Cybersecurity: Developing a Program for Your Business

Information security is the protection of confidentiality, integrity, and availability of information while in transmission, storage, or processing. Information assurance concerns information operations that protect and defend information and information systems by ensuring availability, integrity, authentication, and confidentiality. Both are critical elements in a Cybersecurity Program for Your Business. This four-course specialization focuses on the protection of information in the organization via the lens of today's most current, ever evolving threats. These include: Cybersecurity and today's mobility environment, The Internet of Things, The unpredictable Human factor in organizational cybersecurity known as the X-factor, and a Capstone designed for learners to create a security plan.

The online specialization named in this certificate may draw on material from courses taught on-campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at this university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.

Traci Carte, Ph.D.

Andrew Green

Herb Mattord, Ph.D.

Michael E. Whitman,
Ph.D.

Humayun Zafar, Ph.D.
